PROFILE SUMMARY

B.Tech AI/ML student building production-style LLM applications (RAG, tool-calling agents, FastAPI). Shipped a RAG medical assistant, a LangGraph job-search agent, and a self-healing coding agent, and built a RAG incident chatbot as an intern team lead. IBM-certified in RAG & Agentic AI. Seeking an entry-level AI, GenAI, Agentic AI, or Forward Deployed Engineer role.

EDUCATION

J.B. Institute of Technology, Dehradun Aug 2023 – May 2027
Bachelor of Technology – AI/ML

SD Public School, Yamunanagar Apr 2021 – May 2023
Senior Secondary (PCM)

EXPERIENCE

AI/ML & Data Science Intern (Team Lead) — JSL Works Pvt Ltd Aug 2026 – Sep 2026
Remote

- Led Team SirenSense for 6 weeks to build Siren Sense, an AI traffic and emergency command system, from planning to final submission.
- Designed and built the Incident Assistant, a layered RAG chatbot: exact database queries for counts, TF-IDF and cosine-similarity retrieval for open-ended questions, and Claude answers grounded in stored incident records, with an offline fallback.
- Integrated the chatbot into the live dashboard, tested it on sample questions, and authored the project documentation (architecture, setup, demo flow).

PROJECTS

MediBot — Medical RAG Knowledge Assistant July 2026
Python, LangChain (LCEL), FAISS, HuggingFace Embeddings (BGE), Mistral AI, Streamlit
Code: github.com/Ishaan0901/MediBot

- Built an end-to-end RAG pipeline answering medical questions from open-access NCBI StatPearls literature (web pages and PDFs), grounding responses in real sources instead of model memory.
- Chunked documents (1000 chars, 100 overlap), embedded them locally with BAAI/bge-small-en-v1.5, and indexed them in FAISS; MMR retrieval returns relevant yet non-redundant passages.
- Composed a LangChain LCEL chain (retriever, prompt, Mistral AI) returning each answer with its source and supporting passage, served through a Streamlit chat UI with cached loading and multi-turn history.

JobPilot AI — Agentic Job Search Assistant Sep 2026
Python, LangGraph, Groq, ChromaDB, Adzuna API, DuckDuckGo Search, Streamlit
Code: github.com/Ishaan0901/JobPilot_AI | Live: jobpilotai-ef6m2atix6t98dgnnuzqdj.streamlit.app

- Built a LangGraph tool-routing agent where the LLM (Groq) decides, for each query, whether to retrieve from an uploaded PDF resume, search live jobs via the Adzuna API, or research companies via DuckDuckGo, chaining multiple tool calls before it responds.
- Implemented RAG over the uploaded resume with ChromaDB, grounding answers about skills, experience and projects in the user's own resume.
- Streamed answers token-by-token into a Streamlit chat interface and deployed it live on Streamlit Community Cloud; reached 8+ unique viewers.

DevForge AI — Autonomous Self-Healing Coding Agent Oct 2026
Python, LangGraph, LangChain, Groq (gpt-oss-20b), FastAPI, Pydantic, Streamlit
Code: github.com/Ishaan0901/DevForge_AI

- Built an autonomous coding agent in LangGraph that turns plain-English requests into working Python programs and websites, then runs the code itself.
- Made it self-correcting: after each run the agent captures errors and exit codes and feeds them back to the LLM to fix the code, retrying up to 3 times (recursion limit 15).
- Designed 4 tools (write_code, execute_code, check_result, write_html_code) with conditional routing and a 10s timeout, and exposed the agent through a FastAPI endpoint with Pydantic validation, decoupled from a Streamlit UI showing code, output, errors and a live website preview.

CERTIFICATIONS

IBM RAG and Agentic AI — Professional Certificate (10 courses), IBM · Coursera — Verify Aug 2026
Machine Learning with Python — Course Certificate, IBM · Coursera — Verify Aug 2026
Database Structures and Management with MySQL, Meta · Coursera — Verify Aug 2026

TECHNICAL SKILLS

Languages: Python, SQL
GenAI & Agentic AI: LangChain (LCEL), LangGraph (Parallel & Sequential Workflows), RAG (FAISS, MMR, HuggingFace Embeddings), NLP (TF-IDF), Multi-Agent Orchestration, Tool Calling, Human-in-the-Loop, Agent Memory, Prompt Engineering
LLM Providers & APIs: Mistral AI, Groq, Google Gemini, NVIDIA AI, Hugging Face (Transformers), FastAPI, Pydantic
Machine Learning & Deep Learning: Scikit-learn, XGBoost, TensorFlow, Keras, Data Preprocessing, Feature Engineering, ML Pipelines, Model Evaluation, Hyperparameter Tuning, SHAP
Data & Databases: Pandas, NumPy, Matplotlib, Seaborn, MySQL, PostgreSQL, ChromaDB
Developer Tools: Git, GitHub, Docker, Jupyter Notebook, Streamlit, VS Code
